

**A team of experts at your service
components & equipments**

Our business

Specialized in pneumatic, fluid and mechatronic technologies, we have taken up many challenges in the last few years in order to provide our customers with the best technological solutions on the market.

From standard components to complete turnkey custom equipment, from small to large series we work with your teams to ensure that our solutions are perfectly integrated into your equipment and machines to increase performance and reduce costs.

In an increasingly competitive global environment, we help you differentiate yourself with innovative technologies.

Selling a product is no longer enough.

We support projects until integration and get involved in the processes, implementation and follow-up.

All our partners are carefully selected for their unique technologies, experience and passion for innovation in their specialties. Our philosophy is extremely simple, choose us only if we have the best solution.

A Worldwide presence

We are present in over 55 countries through our MDN worldwide network.

Each partner in the network is able to support you locally.

We are also able to assist you in your global analysis in order to evaluate the gains generated by our solutions.

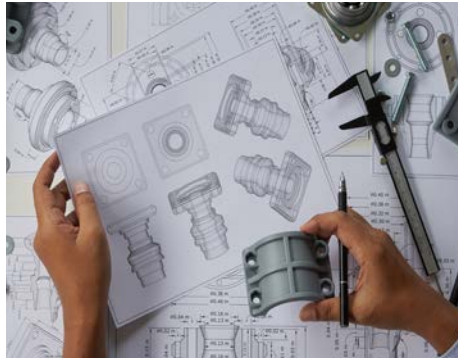

- **Over 3500 employees worldwide**
Present in more than 55 countries
More than 200 service warehouse centers

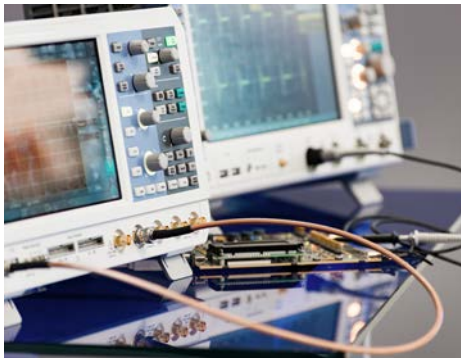

Engineering

Our engineering team is able to support your projects from the simple request for modification of standard components to the complete management of a project from specifications to mass production.

With the support of the Research and Development departments and design offices of our global partners, more than 100 engineers can work together to bring you the innovative solutions you need.

On-site measurements

Our only goal is to help you increasing performances while keeping costs down. It is important to measure and characterize installations and applications before and after the integration of our solutions.

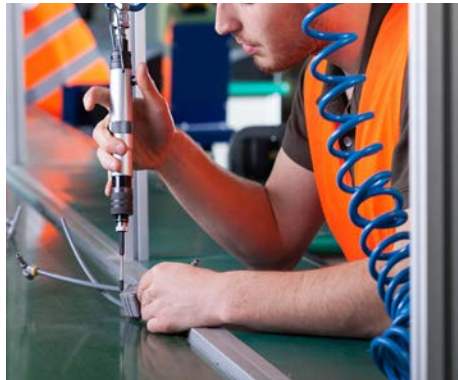

OI Technologies is equipped with the necessary tools to measure on site in order to be able to characterize complete applications and to be able to compare the performance before and after based on real performances.

Unit and series production

Our workshop is designed to allow production by unit or in series according to the quantities to be manufacture, we adapt and automate the production according to needs.

All of our production is managed by our ERP. It integrates a manufacturing module allowing to follow and control step by step the manuals and the quality controls.

At OI Technologies, 100% of the production go through a end-of-line test, that warranty compliance with the specifications.

Profitability

Our team is able to help you increase your profits.

Developed and used by the MDN network, our global tracking tool allows us to highlight the gains generated by our solutions.

For more than 15 years, many international customers have trusted us to track the deployment of optimizations and their profitability reinforcement.
